Potential for the Future

Introduction

My pandemonium = travelling abroad but not having enough time or patience to seek all the available independent sources of information to sate my curiosity

I want to explore my work but I am hobbled before I begin because I don't know where to start!

How can I learn more about these new places without spending all of my time at the museum or the visitor's center. I want to explore!

Concept

Supply a context-aware information Device

- Geocoding
- Wiki-like
- Humorous

"The Hitchhiker's guide to the Earth" - Its about life, the Earth... And Everything

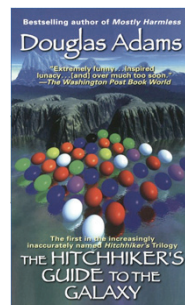

...wait there are too many "devices" out there already!
We need a different approach, maybe use a device that already has mass appeal.

Concept

The Answer is Obvious:

+

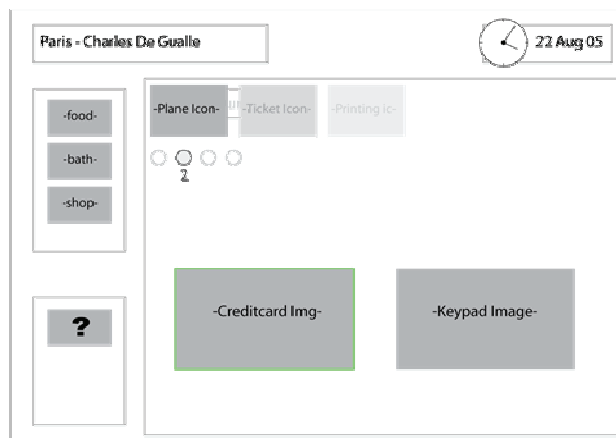

Concept

Imagine having the Earth chapter of the Hitchhiker's Guide to the Galaxy (abridged edition) on your iPod!

Explore your world while you can! The Vogon constructor fleet is probably on its way now!

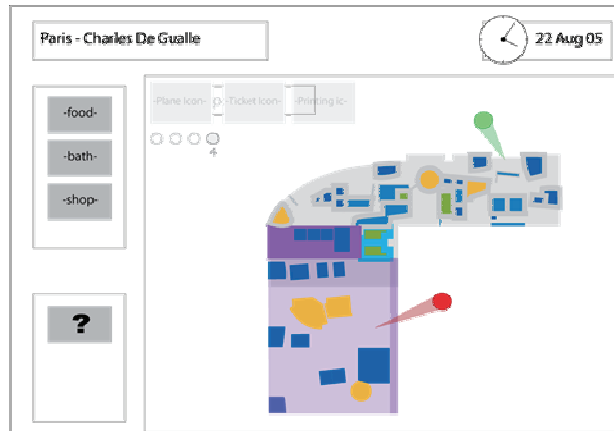

Early wireframes

Early Concepts for solving traveller pandemonium were a bit boring with website-like layout. But they do provide hints as to potential content.

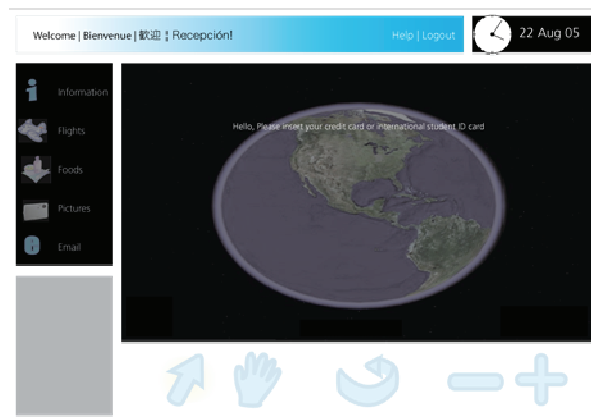

Early wireframes

Early Concepts for solving traveller pandemonium were a bit boring with website-like layout. But they do provide hints as to potential content.

Early wireframes

Here the concept begins to evolve a little bit. The key focus is the content implied by using the google Earth

What if everywhere you traveled you could carry a device with you that had an LCD display upon which the words **Don't Panic** are printed in large, friendly letters?
